Lecturer

Department of Computer Science and Engineering

Functional Requirements:

Stakeholder	Goal	Functional Requirement
Miskat International (client)	Increase wholesale sales and business reach	The system shall allow management to monitor sales, orders, and customers.
Bulk Buyers	Purchase products easily in bulk	The system allows users to register, login, browse products, and place bulk orders.
	Access wholesale prices and offers	The system shall display product details, prices, and promotional offers
System administrator	Manage products and inventory efficiently	The system shall allow admin to add, update, and delete products and manage stock.
	Control orders	The system shall allow admin to view, approve, cancel, and update order status.
	Manage customers information	The system should store and manage customer data in a centralized database.

Non-Functional Requirements:

Stakeholder	Goal	Functional Requirement
Miskat International	Reliable business operations	The system should be available with minimal downtime.
	Support future growth	The system should be scalable to handle increasing users and orders.
Government	Protect customer information	The system should prevent access to non-employee.
Project Developer	Easy maintenance	The system should be developed using standard web technologies for easy update
Bulk Buyers	Quick ordering process	The system should respond within a few seconds to user actions.
	Easy to use system	The system should provide a user-friendly interface.
